GENERAL INFORMATION

Last minute innovation

Last Minute – height adjustable display carts for 2 x 65" displays

Suits perfect for video conferencing, team meetings with different groups with different presentation, project management teams etc.

Display wall mounts for flat screens

Display wall mount

The Conen Mounts display wall mount allows you to mount any VESA display to a concrete wall.

A steel display mount with two “pull and release” locking brackets ensures quick and easy mounting of the display.

1 The integrated leveling screws allow for the display to be leveled after the display is attached. You can secure the display with a pad lock.

Display holder

Micro-adjustment and leveling

Pull & release locking brackets for easier mounting of display

- Heavy duty over the board mount for IFPD
- Compatible with 42" – 86" displays with max. VESA 800 x 600
- Extended version available for displays with VESA 1000 x 600
- “Pull & release” brackets for easy display mounting

Product Code	WM-FRAME
Display range	42" – 86"
VESA pattern	280 x 200 – 800 x 600

GENERAL INFORMATION

Facts about Conen mount systems

With over 40 years of experience in manufacturing height adjustable solutions, Conen has focused on its range of motorized mounts in the past couple of years. Motorized mounts offer several distinct advantages over spring operated or counterbalanced solutions:

Compatible with any interactive technology

ConenMounts motorized solutions allow for a max. 250 kg weight load. The systems work with any interactive technology, whether board and projector or heavy 84" display.

Counter weight or spring tension mechanisms come with a specific set of weights or springs to balance the weight of the system. Any change in weight load, for example by adding speakers, or if a projector is being exchanged, may cause for the system to not work properly.

With a ConenMounts motorized solution, weight load changes are not an issue. Up to a max. 250 kg weight load, our mounts will allow for anything to be added.

Maintenance free

Another benefit of a motorized solution is that the system does not require any maintenance.

Whereas a spring tensioned mechanism tends to lose its tension over time and requires for a system to be rebalanced, a motorized solution is maintenance free.

ADA compliant

The Americans with Disabilities Act (ADA) ensures access to the built environment. To prevent hazards to people with vision impairments, the safety standards limit the protrusion of objects into circulation paths.

These standards also address the accessibility and maneuvering clearance of elements, such as displays, so that all users can take a full advantage of all their features.

All Conen's mobile and wall mounted solutions comply with the requirements of the ADA Standards.

SYSTEM

23

page

Future proof

The modular concept of ConenMounts solutions allows for easy upgrades to future technologies or requirements.

A wall mounted system can easily be converted into a mobile solution, simply by adding a mobile base. And a motorized solution that is purchased now for use with board and

projector can, sometime in the future, be easily converted into a system for use with Flat Panel Display.

All of this is possible because the heart of the system, the motorized center column, always remains the same.

Safe mounting to stud walls

ConenMounts wall mount solutions are the safest wall mount solutions currently available. Unlike traditional wall mounts where the entire weight load is being supported only by the wall, our center column systems absorb all the weight without any wall reinforcements.

Whether mounted to a solid, brick wall or to a wood stud wall, a Conen Mounts solution safely supports your technology.

Limited life time warranty

ConenMounts products comply with all important international products and safety standards, including UL and CSA.

As a commitment to the quality of its products, Conen backs the range of motorized mounts by a 5 year warranty.

GENERAL INFORMATION

Why height adjustable?

Same height for all pupils and teachers?

Wall-mounted systems – either children have to climb, or the teacher will have back pains.

93 – 98 cm

108 – 121 cm

119 – 142 cm

133 – 159 cm

Age group:
2 – 3 years

Adrian, 2 years

Adrian and his friends in the Kindergarten are already really interested in interactive touch displays and special software and exercises for their age.

For children, his age it's especially important that the height-adjustable system enables them to reach the monitor.

Age group:
3 – 4 years

Bea, 4 years

Bea already works together with preschoolers and is looking forward to go to school soon. Especially when colorful interactive tasks are fulfilled on the display she's really attentive. Thanks to the height adjustment she can take part instead of only watching.

Age group:
4 – 7 years

Carl, 6 years

Carl is a school boy now. He loves learning new things. He especially likes working on the interactive display with his class mates. Often his teacher is helping, which is not a problem – thanks to the height adjustment. Everybody can reach the display!

Age group:
6 – 11 years

Diane, 10 years

Diane will be going to secondary school. She's quite tall for her age, and the boys in her class are partly 25 cm smaller than she is. And her teacher is 190 cm tall. It's great everyone can work in the height that is perfect for her or him – thanks to our height adjustment system!

Wall-mounted systems only cover a working range for a small number of users, due to the missing height adjustment system. Especially on schools with changing users, a height adjustment system is essential for ergonomic work.

The differences in size in the teaching staff can be 40 – 50 cm. In school rooms with changing classes, pupils of the 5th and the 10th, 11th or 12th grade have lessons.

Teachers want to work interactively on interactive systems; they want to interact with the pupils or simply show a movie or a presentation.

A height adjustment must enable a low working height for children, up to a suitable height for presentation - reliable, robust and safe.

Age group:
11 – 14 years

Emil, 12 years

Grown up with modern technologies as a „Digital Native“, he has no fear of contact. On Tuesday, he’s in a room that has been used by a fifth-grade class previously. Thanks to the height adjustment, he can adjust the touch screen to his height and give his presentation.

Age group:
13 – 16 years

Franzi, 14 years

14 years and right in the middle of puberty. At that age, nothing that grown-up wants can be cool. Except for the new technologies, which are great of course. It’s also fantastic that they always have the perfect height because of the height adjustment.

Age group: 16 years and older

Greg, 16 years

GrGreg is the tallest in his class. Even some of his teachers are smaller than him. Thanks to our height adjustment system, all pupils and teachers of his class can work on the interactive system.

Age group: 16 years and older

Gerald, 32 years

Gerald is taller than Greg – he’s the tallest teacher in the school. Many of his colleagues are smaller than him. Thanks to the height-adjustable boards and displays at the school, every one of the teaching staff can work in every room on every system.

GENERAL INFORMATION

Why height adjustable?

Uniform mounting height at school?

Not even all teachers have the same size! Let alone the pupils...

Lea, teacher, 46 years

She's a teacher by passion. Motivated and open to new technologies. She's working with almost all classes on the new interactive board systems of the school. Thanks to the height adjustment, she can work on every system, though she's "only" 162 cm tall.

Gerald, teacher, 32 years

With his 32 years, he belongs to the younger teachers, but he's also one of the tallest. He's glad about height-adjustable interactive systems, as he can work in an ergonomically perfect height – and also his pupils from the 6th grade can work on the interactive system. Just like at those good, old-fashioned blackboards.

This height adjustable and tiltable system with 70 cm stroke is suitable for children from early years to adult users.

This means maximum ergonomical comfort for all users.

Flat screens in business do not need a height adjustment?

Yes, sure... The height of the employees is all standard and the same!

Paula, sales trainer

She works as a sales trainer in a big bank, in training rooms of different subsidiaries all over Germany. She's not the tallest with 166 cm, but she can work everywhere thanks to the height-adjustable system – as well as her taller colleagues. Simply practical and brilliant!

Marcus, manager of a marketing agency

He uses the interactive displays for presentation for customers or brainstorming with his team.

The complete team always works in an ergonomically perfect height, thanks to the height adjustment! That includes the trainee who is "only" 158 cm tall.

166 cm

196 cm

GENERAL INFORMATION

Our new standard frame

The new frame system for wall-mounted and mobile system is available!

Our new frame – combining the advantages of both previous systems!

AFSCETA – Our previous frame system for VESA-compatible displays

Our “old” frames for all VESA-compatible displays were offered as standard for all our holder systems so far.

But as we continuously develop and optimize our system, we deliver the new frames as a standard, starting from 2017, described at the right.

Optional: AFSCETACOV

AFSCETABOX – The box with the cable management system

The “box” was an optional variant for our holder system. Optionally, a lid was available for that box. The advantage of the box compared to the standard frame was the option to store away the cable.

But our new frame combines the advantages of both systems in one new frame! The box is still available on request (max. for 75" displays).

Image shows:
System with SCETAVBOX

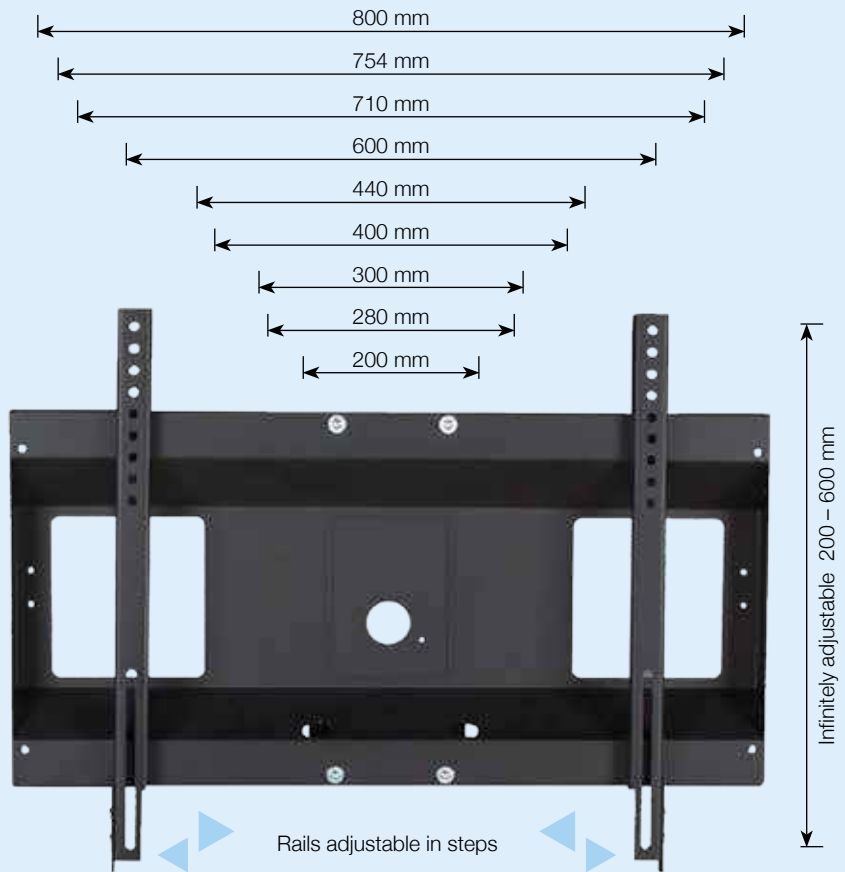

Advantages of the new design

AFSCETAN

More stability due to folded sheet metal

Our brand new VESA display mount combines all advantages of our two former systems – with advanced and easier handling:

- Sturdy construction
- Pull & release locking brackets for easier mounting of display
- Lockable with pad lock
- Cable management
- Power socket can be mounted on rear side

Now quicker and easier to mount to the VESA rails with a quick snap lock.

Securing the display is now possible with a standard padlock (not in the scope of delivery).
(Item no. SCHLIESS-VH)

- Attractive cable management options due to new covers and cable outlets
- Mounting preparation for multiple socket (with 3 sockets) on the back (Item no. KABEL E3)

CONEN MOUNTS

HEIGHT ADJUSTMENT- AND MOUNTING SYSTEMS –
suitable for all displays available on the market

- breath-taking design
- for 42" to 120" displays
- quick and easy installation

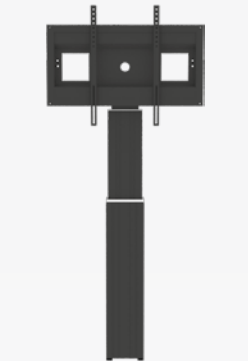

- attractive accessories, for example: White board wings, front shelves, video conference camera tray

- electrically height adjustable systems
- electrically height and tilt adjustable systems, usable in table- and board mode
- fixed height systems
- wall-mounted solutions
- mobile solutions
- free-standing solutions
- enjoy more efficiency with our back-to-back solutions
- maximum attention guaranteed due to landscape- and portrait format frame systems

CLEVERRAIL

Image shows: PYETV/BWW2R mit Clevertouch Plus display

The rolls of the movable wings move in guides.

The centerpiece of this system is the 86" Clevertouch PLUS Multitouch display – interactive working during teaching on the highest level!

You can adjust the height of the complete system with just one button push on the two aluminum pylons mounted to wall and floor. This guarantees that every user can work or present in the height that is ergonomically the best for her or him.

To the right or left of the display there are two fixed side wings (W/H: 96 x 114,5 cm), which are magnetic, can be written on and dry wiped.

Two movable additional wings can be ordered optionally.

Delivery without display.

CONEN MOUNTS

Special integrated solutions

Electrically height-adjustable pylon system with wings for (interactive) displays

1 Movable wings

The rolls of the movable wings are guided by special profiles. The rubberized special rolls make the movement of the wings smooth – you don't need to use force. It's child's play!

Stroke
50 cm

3 Panel lock – protection against vandalism

There are two straps on the two movable wings. With these and a padlock, the wings can be locked. This means that no one can open them when they are closed, switch on or damage the display.

Clever RAIL boardsystem

2

This electrically height-adjustable board system with fixed or optionally also with movable panels is available for all displays from 65" to 86" display diagonal.

Please state which display you want to use when ordering.

5

4

wisch

fläche

3

Panel lock

- to lock the side wings in front of the display are included

4

Electric height adjustment

The working height can be adjusted at the push of a button. This way every user can work or present in the height that is ergonomically the best for her or him. Additionally, the controlled movement preserves the technical elements of the display. The adjustment scope is 50 cm.

5

Side wings

The fixed and the movable wings can be written on and dry-wiped with special pens. The surfaces are magnetic and dry-wiped. The wings are framed in aluminum profiles, waterproof sealed and black anodized. The movable wings run on rolls in guides – they can be moved without using force.

CONEN MOUNTS

Special integrated solutions

Jolli Educational Flat Panel Cart

The 'JOLLI Flat Panel Cart' is the next generation of flat panel carts for education. The cart allows for the display to be smoothly raised and lowered and to be moved from classroom to classroom, connecting teachers and students with the latest technologies. Designed for rugged environments, the cart features a sturdy metal base with heavy-duty castors. The V-shape base ensures easy access, including those in wheelchair.

Large ergonomic handles on each side of the display aid mobility and help protect the display in transport.

Safely concealed in the center column is the UL certified actuator which offers 50 cm of smooth height adjustment. With a push of a button the display can be adjusted so that teacher and children can interact with the display.

- Sturdy motorized mobile cart for K-6
- Compatible with 42" – 86" displays
- Cart comes standard with handles, rotating laptop shelf and 2 plastic bins
- Standard in stylish blue and aluminum
- 50 cm of safe and smooth vertical travel

Display wall mounts for flat screens

Over the board

Conen Mounts "Over the Board Mount" allows you to mount the flat panel display over the existing dry erase or chalk board.

The system features two sturdy posts that attach above and below the existing board and offers a 10 – 14 cm clearance to clear any chalk tray.

A steel display mount with two "pull and release" locking brackets ensures quick and easy mounting of the display.

1 The integrated leveling screws allow for the display to be leveled after the display is attached.

Scope of delivery – with cable remote control

With 2 buttons

With 4 buttons

Projector mount

Aluminum projector mount system with integrated cable duct

The cable duct is hidden in the projector arm.

There are no cables hanging down the systems, as these are integrated neatly into the aluminum profile of the projector arm.

CLOUDBOARD

Electrically height adjustable cloudboard systems for interactive projectors

Unique and multi-functional design

The height adjustable interactive board system

Our electrically height adjustable interactive classroom boards are suitable for all walls.

The adjustable pylon consists of two telescopic aluminum profiles into which the motor is integrated.

With two buttons on the systems, the board system can be adjusted to the height that suits each user.

Advantage of the electrical height adjustment:

Longer projector light lifespan and longer life of the projector itself, as controlled movement protects expensive technology.

Board and panels

No more annoying white borders! The projection surface of the CloudBoard is an extraordinary W/H: 2,07 x 1,30 m. With a format of 16:10 of the projector the central surface is completely illuminated.

Use 100 % of your projector's performance!

The black frame around the projection-optimised central surface ensures the best possible contrast and a pin-sharp image.

The optionally available panels offer more writing and presentation surface. The frames of the panels are black anodized and match the central surface perfectly.

Active loudspeaker system
Cloudspeake, 2 x 30 W

Item no. CLSP

Holder
for vertical assembly above board
systems

Item no. SM-HDL

Finger touch

This system is also suitable for finger touch operated projectors without limitation of the projection size. Above the projection surface is enough space for a finger touch operation module.

Advantages of central surface and side panels

In contrast to classical interactive white board systems, our CloudBoard has an enormous advantage – You can work interactively or with white board markers on a stable, mat central surface:

- Glare-free mat surface for a perfect projection- and working result
- Board and panel can be written on with white board markers and dry wiped
- All board surfaces are magnetic so you can use all your magnetic work equipment

Image shows:

CloudBoard EHICLOUDPO with Hitachi projector and fingertouch-module, see page 115.

For use with finger- and pen operated projectors e.g. of the following manufacturers

HITACHI

CLOUDBOARD

Electrically height adjustable cloudboard systems for interactive projectors

Mobile, electrically height adjustable and tiltable system

„workITdesk DeLuxe“

The „workITdesk deluxe“ is the ideal solution for schools that are looking for mobile, customized interactivity. Teamwork or presentation mode? It is totally your choice – perfect for any set up or any situation.

Opening to run cable to finger touch unit

Wired remote control included

Technical drawings

When ordering, please state the dimensions of the interactive projector used.

Image shows:
WID-DL74 with
Epson projector and
fingertouch-module

The „workITdesk DeLuxe“ is the dry-erase version of the „workITdesk“ mobile height and tilt adjustable table.

It key features a black table top with a 74" diagonal dry erase and magnetic projection surface applied.

The unit is compatible with virtually any ultra short throw interactive projector. The fingertouch-module can be either applied onto the projection surface or attached over the surface directly into the board.

The unit offers a smooth and safe 50 cm vertical travel and 0 – 90° tilt adjustment of surface and projector. Retracted the „workITdesk“ fits through a standard doorway with the projector still connected.

The „workITdesk deluxe“ is the ideal solution for schools that are looking for mobile, customized interactivity.

- Electrically height adjustable and tiltable systems with central telescopic pylon column
- For use with virtually any Ultra Short Throw projector
- White **projection surface in the format 1,60 x 1,00 m**
- Projector arm and mounting plate included
- Black top with 74" large, dry erase and magnetic projection surface applied
- Stable stand with 4 heavy load castors, 2 lockable
- Fits through the door

HEIGHT ADJUSTABLE SYSTEMS FOR IWBs

HEIGHT ADJUSTABLE SYSTEMS FOR IWBs –

Solutions for all available interactive whiteboards and projectors

The features of the height adjustable systems

- Electrical and manual height adjustable systems for use with all available interactive white boards
- Projector mount systems for the integration of any ultra short throw projectors

HEIGHT ADJUSTABLE SYSTEMS FOR IWBs

Electrical height adjustable systems for IWBs

Height adjustable system for all interactive whiteboard brands

ACCESSORIES

138

from page

Interactive white boards have increasingly made their way into German classrooms.

As manufacturer of boards and class room furniture, we made it our business since years to offer well functioning state-of-the-art, sustainable, sophisticated height adjustment systems for interactive white boards.

We offer electrically and manually adjustable height adjustment systems for all interactive white boards on the market.

We also produce mounts suitable for all popular ultra short throw projectors.

In this chapter you will find an overview of the different systems:

- Wall-mounted, electrically height adjustable pylon systems
- Mobile, electrically height adjustable pylon systems
- Wall-mounted, manually height adjustable pylon systems
- Accessories for the different systems

Image shows:
SCETAWWIWB with Benq projector.

1

Operation of the electrical height adjustment

1

Electrical height adjustment

Our electrically height adjustable interactive board systems are available wall-mounted as well as mobile. The adjustable centre column consists of two telescopic aluminum profiles into which the motor is integrated.

Advantage of the electrical height adjustment:

Longer lifespan of the expensive projector light and longer life of the projector itself, as controlled movement protects expensive technology.

With two buttons on the systems, the board system can be adjusted to the height that suits each user.

Please ask us, if your device is not listed on the below table!

EXAMPLES FOR HEIGHT ADJUSTABLE SYSTEMS FOR INTERACTIVE WHITE BOARDS

Brand	Model
Hitachi	Starboard FX79, FX89W
Interwrite	Dualboard I1289
Legamaster	Touchboard 77", 87"
Polyvision	Eno Board 2610, 2810

SMART KAPP 42 TROLLEY

SMART kapp 42 trolley

Optimum flexibility in presentation and moderation!

Image shows:
Covering plate optional

The ConenMounts kapp 42 stand provides a stable and stylish mobile solution for SMART kapp 42 capture board.

The V-shaped base ensures optimum stability and allows easy access to the board. Its white finish complements the design of the SMART kapp 42.

The stand key features two mount positions for optimum ease of use and fits through any standard door opening, offering optimum flexibility in education, hospitality or business.

Assembled in just 5 minutes!

- Flexibility in use and deployment
- Robust steel construction with durable, mobile base
- Easy access to SMART kapp thanks to V-shape base
- Stylish design & white color compliment the SMART kapp 42
- Fits through any door opening
- Trolley ships flat packed – Courier shippable
- Easy & quick mounting by 1 person

Technical drawings

Comes standard with powder coated, steel mobile base with 4 casters (2 locking) for easy transportation.

SMART kapp 42 trolley

Comes standard with powder coated, steel mobile base with 4 casters (2 locking) for easy transportation.

Item no. **Skap42-tro**

Optional: Covering plate

Black covering plate for Skap42-tro made of Compact/Solid Grade Laminate.

Item no. **Skap42-cov**

Technical specifications:

Height: 181 cm

Width: 70 cm

Depth: 40 cm

Weight: 13,15 kg

Color: white (RAL 9016)

2 mounting positions; distance from floor to top of SMART kapp 42: minimum 185 cm, maximum 195 cm

BOARDS FOR INTERACTIVE PROJECTORS

Electrically height adjustable board systems for interactive projectors

Unique and multi-functional design

System features

- Special board height of 1,30 m
- Projection surface can be written on
- Black anodized frame
- Stable design projector arm made of aluminum

Electrically height adjustable interactive board systems

Our electrically height adjustable interactive board systems are available wall-mounted as well as mobile.

The adjustable centre column consists of two telescopic aluminum profiles into which the motor is integrated.

Advantage of the electrical height adjustment:

Longer projector light lifespan and longer life of the projector itself, as controlled movement protects expensive technology.

With two buttons on the systems, the board system can be adjusted to the height that suits each user.

1 Finger touch

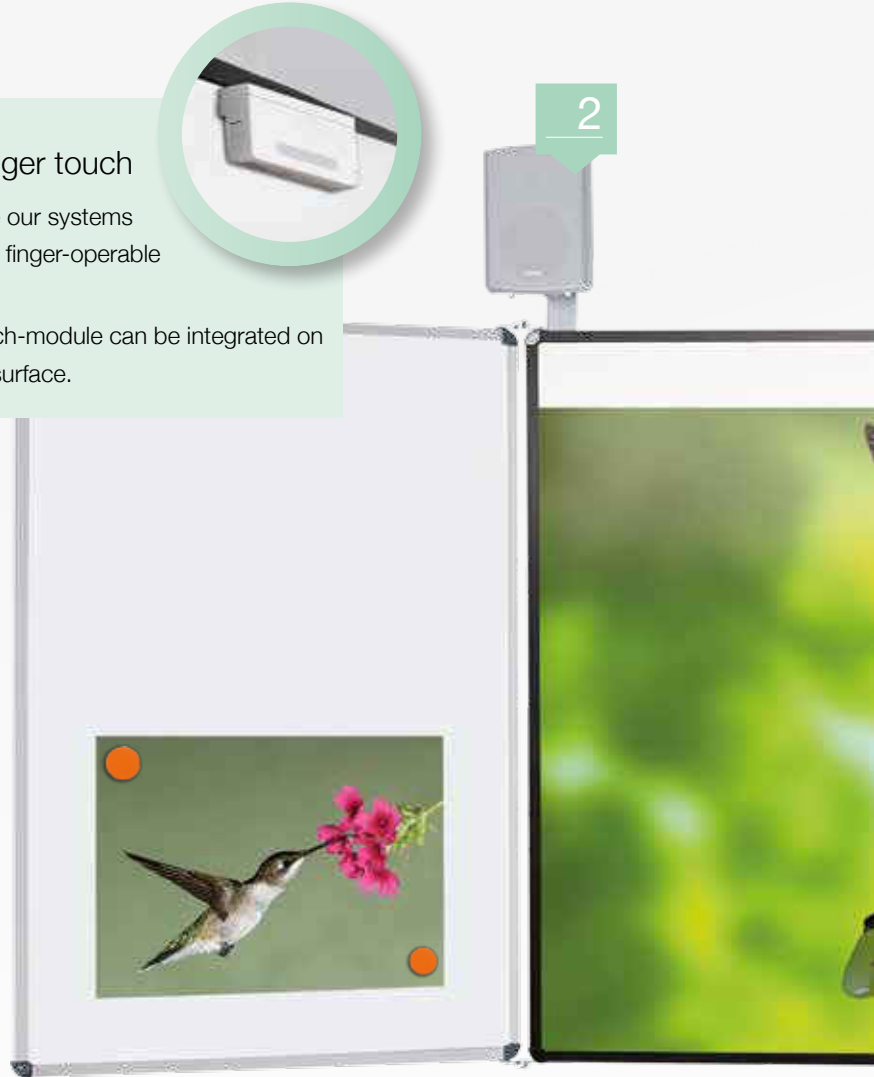

Please note our systems for use with finger-operable projectors.

A fingertouch-module can be integrated on the center surface.

2

Stroke
50 cm

deluxe – the special board height of 1,30 m

The height of the centre surface is an extraordinary 1,30 m.

With a projector format of 16:10 the complete surface is illuminated (without finger touch module).

Use 100 % of your projector's performance!

Design of the projector arm

The extra wide aluminum profile ensures maximum stability.

The cable duct is hidden neatly in the projector arm.

There are no cables hanging down the system.

PROJECTION BOARDS FOR WALL MOUNTING

PROJECTION-OPTIMISED WALL BOARDS

The uncomplicated ones

- Board sizes of 60" – 111" optimised for projections in the format 16:10
- Work with fingers or pens – integrate different interactive projectors
- Boards in cloud format or framed with black anodized aluminum profiles
- Different surfaces, for example magnetic ones which can be written on with white board markers
- 2,5 cm wall distance behind the board for cabling

PROJECTION BOARDS FOR WALL MOUNTING

With mat surface

Cloudboards with mat surface, magnetic, can be dry wiped

Image shows:

Cloudboard PTCL2013
with Epson projector and
finger touch module

Finger touch

These boards are also suitable for the use with finger-operated projectors without any limitation regarding the projection size

- Magnetic, can be written on with white board markers and dry wiped
- Wall distance 2,5 cm behind the board for cabling

Screensize	Format	Dimensions, W/H	Image size, W/H	Item no.

FURNITURE FOR AUDIO-VIDEO

Storage of notebooks and mobile devices

Notebook tower and matching top-mounted cabinet

DECOR/COLOURS

195

page

1

Cabinet with 13 compartments for notebooks

Inner dimensions of the compartment, W/D: 50 x 34 cm and adjacent 13 compartments (dimensions, W/D: 12 x 34 cm) for the corresponding power supply unit. Back wall is offset inwards by 10 cm, 2 ventilation grids. 2 x 8 sockets, 2 socket strips, can be switched separately.

Dimensions of the cabinet, W/H/D: 80 x 150 x 50 cm

Socket strips left, notebook compartments right

Item no. **LTL-NT13TSL**

Socket strips right, notebook compartments left

Item no. **LTL-NT13TSR**

Each power supply unit in its own compartment

There are vertical slots in both center walls – so plugging is quick and easy.

2

Top-mounted cabinet for notebook tower

Supplements the notebook tower to the standard height of our cabinets – 190 cm. With cable outlet in the back wall. Ventilation via back wall, upwards.

Dimensions of the cabinet, W/H/D: 80 x 40 x 50 cm

Small door left, big door right

Item no. **LTL-NT13AL**

Small door right, big door left

Item no. **LTL-NT13AR**

Mobile notebook tower

This notebook tower provides space for up to 13 notebooks.

The body and the big door are delivered in one colour, the small door can be ordered in a different colour.

The special highlight – behind the small door are the power supply units of the notebooks. It stays locked, so the students can't access the power supply units when they take out the notebooks.

Next to each notebook compartment (dimensions, W/D: 50 x 34 cm) there is a separate compartment (dimensions, W/D: 12 x 34 cm) for the power supply unit.

Correct ventilation is an important subject!

We use a gradual ventilation. One ventilation grid at the bottom and one at the top in the back wall provide the best possible air circulation. The back wall is offset inwards by 10 cm, so there is no accumulated heat in front of the wall.

Castor

Compartment as described on page 182, but movable. 4 stable steel castors, two are lockable.

Dim., W/H/D: 80 x 150 x 50 cm

Socket strips left,
notebook compartments right

Item no. **LTL-NT13TSLF**

Socket strips right,
notebook compartments

Item no. **LTL-NT13TSRF**

Put your notebook in the compartment, lead the cable through the wall to the notebook, plug in – ready!

Teacher's desk

Due to the height adjustment you can work standing or sitting, as you prefer.

The height adjustment works via gas pressure system.

You can turn the plate and loosen it to adjust the table. If you have the correct height, turn again slightly and the system locks.

Adjustable from 80 – 120 cm.

GENERAL INFORMATION

Decors and RAL colours

If you do not state anything else while ordering regarding the colours/decors, we deliver all furniture and devices in a standard design. Information of the product-specific standards can be found in each chapter.

If you have any other wishes regarding the colour and/or decor than the standard, you can choose from the colour samples just as you like and matching your taste and ambiance. Please state the colours you would like to have when ordering. Colour deviations are subject to typography.

19 decors for melamine-coated chipboards

All furniture and furniture parts are made of 1,9 cm strong melamine-coated chipboards according to DIN 68765, the eco-friendly E 1 quality.

Standard decors
