FELT DRAWER

Did you know that since the 1950s, around 8.3 billion tons of plastic have been produced worldwide? Only 9% of it has been recycled, where the rest become waste, or are discarded directly into the ocean. Within the framework of this development, we have added value to waste plastic bottles, and turned these into essential products for the developing world.

The APTO collection contains several products crafted from repurposed plastic, including this design-protected felt drawer.

The felt is produced by plastic bottles from the ocean containing a minimum of 70% recycled material. Meaning, the drawer has a sustainable aspect providing personality and authenticity.

The drawer has achieved the design protection due to different reasons. The combination between the organic shapes, the modern expression, - while being opened and closed, and the sophisticated design with hidden sliders, are definitely remarkable features to highlight. Despite the directness, an instinctively powerfulness is occurring when furnishing with this felt drawer, - even at existing working environments. This is mainly due to the statement provided by the combination of the recycled material and the aesthetically and timeless design, where every detail has been considered.
