FLOWER HOUSE

We are mainly staying inside, since the majority of all work places are located inside. Meaning, an indoor climate is an important factor for the well-being of the employees. A way in which the indoor climate can be significantly improved is plants and flowers. They increase the humidity, purify the air and provide a beneficial environment. This may result in economic benefits, for example, because artificial climate control is less frequently used, or due to an increase in productivity.

Flower House is a different and unusual way to add extra green towards the preferred area, which automatically is lifted to new, exciting heights. The flower-construction is attached by four multi clamps in order to place the Flower House as preferred, - could be at the desk, the meeting room, canteen tables, or something differently. In other words, the decoration of the working environment can be taken to new heights in order to change the uninspiring working areas.

The Flower House is delivered with two vertical cylinder tubes, four horizontal cylinder tubes, two flower boxes including two size-matching plasticboxes.
