

Smart Office 11

User-friendly and stable

 BAKKER ELKHUIZEN

Work Smart - Feel Good

Flexible, light and easy to install

A good work posture prevents physical complaints. With the Smart Office 11 Arm you can determine the right viewing height and distance.

This is how a monitor arm reduces neck strain and is better for your eyes. The right viewing distance is about one arm long. The viewing height is 10-20 degrees from the eyes.

We advise having a screen that can easily be adjusted and tilted so that every user can adjust its height.
