

SPS-Sliding Panel System

The Sliding Panel System is our reference moving panel mechanism and allows complete concealment of a flat screen television. The mechanism takes a panel inwards and moves it out of sight behind the surrounding panel work before advancing the screen to sit flush with the wall. A distinctively brilliant design, this one of a kind mechanism offers the ultimate in look, functionality and 'wow' factor. Available in a host of options, the Sliding Panel System allows you to design a wall or cabinet with complete freedom.
