

MonLines MBS030B

Mobile electric TV stand up to 75 inch

Description

A mobile TV stand such as the MBS030B model from MonLines is an ideal tool for video conferences, presentations and much more. Thanks to the robust base plate, the electric TV stand supports screens of up to 75 inch / 50 kg and can be conveniently adjusted to the desired viewing height using the remote control. Favorite positions can be saved on the RF remote control and thus quickly recalled at any time. With its anti-collision function (automatic stop in the event of obstacles), overvoltage and overheating protection, the TV lift has a comprehensive safety concept. Depending on whether it is for stationary or mobile use, the 4 standard feet can be removed and replaced with the supplied castors with brake function to move the monitor stand from room to room. The linear design with decorative covers blends in perfectly with different environments. The integrated cable guide keeps all device cables neatly organized.
