

## MonLines MRH001

### Monitor mount for tubes (28-60 mm)

### Description

The MonLines MRH001 represents a slim column-mounted monitor holder, particularly suitable for screens of up to 30 inches in size and weighing 10 kg or less. The monitor or television can be tilted both upwards and downwards, as well as adjusted between landscape and portrait orientations. The monitor pipe holder is furnished with a sturdy fastening ring and can be effortlessly affixed to round pipes or masts with a maximum diameter of 60 mm. This renders it exceptionally fitting for deployment in workshops and other production facilities. The pipe holder is securely attached to the pipe or column using clamping screws, permitting the mounting of a monitor or television onto a circular support bar, thereby facilitating a more flexible screen configuration.

The MonLines MRH001 monitor bracket can be affixed to columns, rods, or tubes ranging from 28 mm to 60 mm in diameter. The column bracket is adjustable in terms of tilt and rotation and is designed to accommodate screens of up to 30 inches in sizes.

### Key features
