

# TabLines TWH tablet wall mount

Mounting instruction

Please read the assembly instruction before installing and set-up! This will protect and prevent the product from damage.

## 1. Wall mounting

Fig. 1 adjusting the housing

Fig. 2 marking the holes for drilling

Fig. 3 screwing the housing

Fig. 4 inserting the tablet

### 1.1 Adjusting tablet enclosure

Remove the magnetic frame from the case and put it aside.

Hold the case in either portrait or landscape position. Level the TWH wall mount with a spirit level.

### 1.2 Marking and drilling the holes

Mark the drill holes in the recesses provided in the housing of the TabLines TWH Tablet wall mount.

Then drill the four holes.

### 1.4 Screw on housing

Fasten the housing with four screws and, if necessary, dowels to match your wall. You can obtain these from an appropriate specialist dealer.

Check that all screws are tightened securely.

### 1.5 Inserting the tablet

Position the tablet between the insert strips (the insert strips are supplied already glued and included in the scope of delivery).

Make sure that the home button on the tablet is on the side / position you prefer.

Fig. 5 attaching the magnetic frame

### 1.6 Attaching the magnetic frame

Now position the magnetic frame on the housing and press it down carefully.

The tablet is ready for use in the TabLines TWH wall mount / enclosure.

## 2. Optional cable routing / power supply

Fig. 6 optional cable routing

### 2.1 Cable routing through the rear

If you wish to install your TWH directly above a power socket, the charging cable can be led out through the opening which is provided in the housing. In this case, spacers must be fitted between the wall and the housing. Spacers are included in the scope of delivery by prior arrangement.

Fig. 7 optional power supply

### 2.2 TecLines TNT001 wall mounting power supply

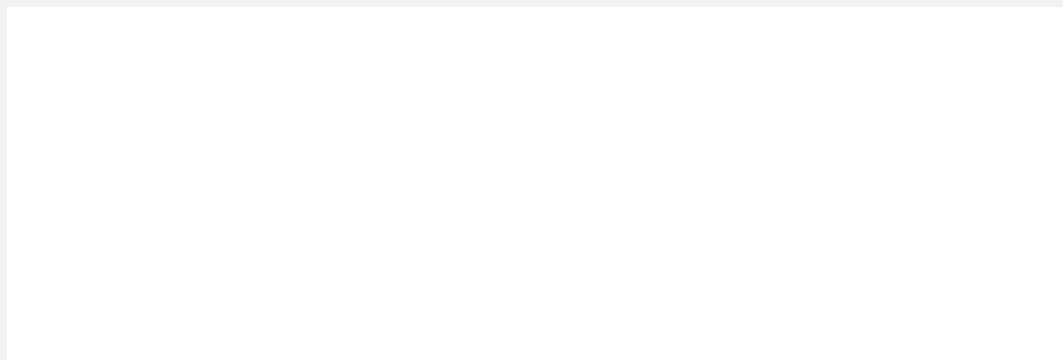

To charge your tablet in the TWH Tablet wall mount, we recommend the TecLines TNT004 power supply for permanent charging.

Due to its compact form, the TecLines TNT004 can be integrated into conventional flush-mounted switch boxes (System 55) and screwed to the housing of the wall mount.
