

TecLines TBH002B

Universal ceiling mount 360° rotation

Description

Projector ceiling mounts are secure, durable and relatively unobtrusive mounts for projectors in a suitable place on the ceiling. Additional functions such as the ability to change the tilt angle, adjust the height, as well as the ability to rotate and tilt the mount, allow the projection to be optimally adapted to the projection canvas or screen.

Ceiling mounts for projectors are not only suitable for home movie viewing but also for presentations in offices, educational institutions such as universities, technical colleges or schools. The TecLines beamer ceiling mount can be rotated 360°, tilted +/- 15° horizontally and vertically and can support loads of up to 23 kg. Many beamer / projector types are compatible with the TecLines universal ceiling mount. The integrated cable entry for HDMI and power supply disappear inconspicuously directly in the pipe. The bracket is made of shock-on scratch-resistant powder coating metal and is extremely stable.

Key features

Mounting type:	Universal projector / beamer ceiling mount
Unit weight:	1.66 kg
Material:	Powder coated steel
Finish:	Black
Load capacity:	23 kg
Horizontally / vertically tilt:	+15° / -15°
Rotation:	360°
Scope of delivery:	Dowels, wall screws & operating instruction
