

TecLines TKM009W

Keystone module cinch socket/socket, gold-plated

Description

The TecLines TKM009W Keystone is a cinch multimedia feed-through coupling for installation in Keystone panels or junction boxes by means of a simple snap-in mounting. The Keystone module is equipped with a cinch connector socket on both sides so that the cables can be plugged in directly. The adapter is also suitable for extending two cables. In many of the multiple sockets, which can be mounted in / on the table or wall, there are empty fields / empty panels. The Keystone custom modules can be simply fixed into these empty fields / support frames with a screwdriver and assembled individually according to requirements. CUSTOM MODULES can be retrofitted or replaced quickly and with minimal effort. TecLines offers a wide range of custom module components for video, audio and network connections for sockets and connection panels. To VGA, HDMI, USB or RJ45 connections, for example, which can be easily integrated in multiple socket strips with empty fields or carrier frames.
