TecLines TKM012W
Keystone empty adapter square, white

Description

In many of the multiple sockets that can be mounted in or on the table or wall, there are empty fields / empty panels. The Keystone custom modules can be easily attached to these empty fields / support frames with a screwdriver and individually assembled according to requirements. CUSTOM MODULES can be retrofitted or replaced quickly. The TecLines TKM012W square empty adapter / blanking cover made of plastic is needed to protect the unused ports in sockets and prevents from entering dirt and dust into the junction boxes. The dimensions of the Keystone modules or the empty adapters all follow a standard so that they can be mounted in the brackets provided for them.
